

# Configuration Comparison

1000 server nodes reduced to 84 using Intensivate PCIe card

## Overview

Here is a demonstration of the Intensivate PCIe accelerator advantage using a real world Hadoop cluster node configuration that includes 1PB local storage.

In configuration A there are 1000 typical 1U server nodes for the Hadoop cluster. Configuration B uses the same server as a host, combined with one Intensivate PCIe accelerator card and dual port 100Gb network adaptor.

The calculations show that the 1000 1U cluster is equivalent to 84 1U when equipped with the Intensivate cards, while providing similar network bandwidth per CPU core along with higher main memory bandwidth per CPU core.

### Configuration A

1U/24GB memory / dual 10Gb NIC, 1TB storage

**1000**  
1U Systems  
*IN 24 RACKS*

### Configuration B

1U/24GB memory / dual 10Gb NIC, 12TB storage, 1 Intensivate card, 1 dual 100GB NIC

**84**  
1U Systems  
*IN 2 RACKS*

	<b>Configuration A:</b>	<b>Configuration B:</b>
Number of Cores / 1U node NIC Main memory GB Total Local storage 1 Rack =	16 2 x 10Gbs 24GB/ node 1PB 42 1U systems	192 (1 card x 12 chips x 16 cores) 2 x 100Gbs + 2 x 10Gbs = 220Gbs 384GB/node (32GB x 12chips) 1PB 42 1U systems
